

Home - Connectivity, Status, & Menu

Neighbors - Who's in direct range right now

Messages - See, send, reply, delete, status

Location - Where are others, relative to you

Neighbors / Signal Strength

- 1+ Neighbors, Excellent Signal
- 1+ Neighbors, Great Signal
- 1+ Neighbors, OK Signal
- 0 Neighbors -or- Poor Signal

Wake

Get device's attention, wake screen

Power

Push, hold, or slide to power off/on

Usage Tips

- For best results, leave devices powered on as often as possible. It makes your cluster perform better.
- Your cluster optimizes & adjusts automatically as needed.
- When sending a message, instead of constantly watching the screen, let the screen sleep and leave it alone for a minute or two. *This is when meshing happens.*
- If someone doesn't appear on the neighbors screen, send a message anyway! *Let the meshing do its thing.*
- Try the Blackout Comms Live companion app or Overlook app for a different user experience with your Blackout Comms device
